

## Wheel alignment check

E53, E65, E46

**Situation:**

New software for the BMW KDS Beissbarth system is available from TIS CD 11/01.

This software allows a wheel alignment check on E46 / E53 / E65 vehicles without having to make sure the vehicle is in the normal position. It is no longer necessary to place a load on the vehicle.

This makes the work of the mechanic much easier and greatly reduces the amount of work involved.

For vehicles that have been damaged in an accident, whose height setting cannot be measured, e.g. due to deformed side panels, it is possible to switch to wheel alignment check in normal position.

*Note:*

Only check E46 M3 in normal position.

**Procedure:**

"Update" BMW KDS Beissbarth system as in the past and perform wheel alignment check as directed on the screen.
